Do you have to sign on each time you enter the site or have I missed ticking something as usual ? and is this question going to rate alongside the red button?

Profile->Privacy->'Save username and password between visits.'

Tick that box. :)

It can work either way. If that checkbox isn't ticked, you get timed out after a certain length of time. If it's ticked, you have to physically logout to be logged out, else you'll be logged in constantly and automatically each time you visit the site.

No, if I click on something else in my bookmarks and then come back its fine. When I shut down the internet and come back I have to log in again. Only had this problem since I changed from explorer to firefox. :mad:
Although it still works fine on hls :whistle:

I'm on Firefox as well and just tried clicking out of internet and got straight back in without having to log in again . I'm lucky when I've got problems I call for my son he's a computer engineer. He usually takes about 2mins to sort it calls me a pr@ and walks off muttering. Sorry I can't help but I can just about switch them on and off.

You probably have Firefox setup to clear cookies on close then, I'd guess. Try clearing your browser cache first, and if that doesn't make any difference, look for that delete cookies on close option in Firefox. It'll be in the options settings somewhere. If that option is checked, untick it.
