after a good/powerful but not too expensive (snap on) battery impact wrench. 1/2".

wondering if any of you have any or have experience with them and what ones are good to go for other than £500 +vat snap on ones.

ta

I've run out of plutonium though.
Would 30,000 Duracell PP9s wired in series work?

yeah the main purpose is wheel nuts, hub nuts and other tight bolts that it would just make my live easier and jobs shorter.

what do you use yours for growler, the price is awesome. needs to be powerful but not over the top.
